Conduct Daily TOC-IM Handshake Process

Version 2.3 Updated: 11 March 2024
Version 2.4 Updated: 16 August 2024
Version 2.5 Updated: 16 August 2024

Purpose of Process:
It is important that daily reconciliations must be performed between the IM and each TOC regarding all deviations that occurred during the past 24 hours. Whenever either the IM or any TOC deviates from planned schedules or when deviations impact available slots, the reasons and responsible parties for such deviations and their impact should be determined as close as possible to real time. This is necessary to ensure that all supporting documentation and information to substantiate what happened, what caused it and who is responsible can be gathered and filed, to ensure proper audit trails of what exactly happened to each TOC order. This will also limit any later disputes as to who should be held accountable for the total impact of each incident.

Attempt to Resolve open handshake items within next 48hours
All red flagged items resolved within 48 hours?
17.
Attempt to Resolve open handshake items within next 72 hours
All red flagged items resolved within 72 hours?
18.
Log unresolved handshake report items to be discussed at next Route Logistics Forum
All red flagged items resolved at RLF?
14.
Receive Feedback on resolved handshake report items
TOC satisfied with resolution feedback provided?
19.
Lodge dispute with Regulator
Invoice TOC
Resolve Disputes
Provide Shift-based Operations Execution And Deviation Reports (Yard Level)
Receive Daily Handshake Report

- TOC must log all deviations from Published ITP (outside of tolerance) that it becomes aware of (regardless of cause) on TOMS or an agreed external incident capturing system, capturing a preliminary reason / cause where possible.
- Every deviation must be linked to the relevant Train/Slot and Order number.

- The IM must log all deviations from published ITP (outside of tolerance) that it becomes aware of (regardless of cause) on TOMS, providing a preliminary reason / cause where possible.
- The IM must also log all deviations caused by other IMs on TOMS, capturing a preliminary reason / cause where possible.
- Every deviation must be linked to the relevant Train/Slot and Order number.

- The IM will daily assess and follow up (investigate) all TOMS-logged TOC Train-related deviations.
- The IM will track and collate all supporting deviation documentation per train-specific deviation.
- The IM will log and file all supporting documentation per deviation electronically.

- The IM will assess Daily National Clearinghouse reports of all logged incidents that impacted TOC slots, to determine which party is responsible for each deviation and Cause.
- The key responsible party that will be allocated to each TOC deviation will be one or more of the following – IM, Specific TOC, another IM, Parties externa to Transnet and Force Majeure events.

The IM will create a preliminary log of all TOC slot-related incidents and deviations that occurred in the last 24 hours with allocated reasons and responsible parties

- For every incident that impacted or delayed contracted and allocated TOC slots, the IM will verify the deviation time, location, Train/slot And order number(s) impacted, deviation category, deviation reason, root cause and allocated responsible party.
- Missing information will be followed up with all relevant stakeholers.

The IM will assess all TOC slot(s) impacted by a deviation over the past 24 hours and determine the size and scope of the impact:
- Which TOC slot(s) were not taken up or used?
- Which TOC slot(s) had to be cancelled?
- Which TOC slot(s) had to be re-scheduled?
- Which TOC slot(s) were delayed and what were the total delay minutes per slot?

- Daily at 08:00 the IM will create and update a final 24-hour Handshake Report for every TOC (Shift reports for the previous 24 hours' shifts are consolidated).
- The Handshake Report will list all daily deviations details per TOC Train number linked to all supporting documentation.
- Each report should cover all TOC Train related events (linked back to the relevant TOC order number) for the past 24 hours, including all incidents that caused slot cancellations and delays, with reasons, allocated root causes and responsible parties, as well as each deviation' impact assessment.

- When each TOC reviews each daily handshake report and when it is discussed with the IM, each TOC should raise any item or detail on report it does not agree with, citing reasons and providing supporting documentation.
- All items on which a TOC does not agree should be flagged as open handshake report items (items on which no agreement could be reached).

- The IM will publish each TOC-specific daily handshake report on TOL to afford every TOC the opportunity to review each report.
- The IM will discuss each daily handshake report with every TOC, with the goal to reach agreement on every item in the report (incident description, deviation, reason, cause, responsible party, deviation impact).

Each TOC must sign off every daily handshake report (including the flagged open items).

Every signed-off handshake report will be filed by the IM, together with all red-flagged items and supporting information per TOC deviation.

Resolution should be betwwen 72 and 96 hours

- The IM will provide daily feedback to all impacted TOCs on resolution of all open handshake report items, including items that could not be resolved, with reasons.
- Final TOC feedback will be provided on open items that could not be resolved by the IM within 96 hours after the first handshake report was issued.
- The IM will provide further feedback on open items that could be resolved at the Route Logistics Forum

If it is a cash TOC, the monies must be paid. If it is a gurrantee the monies will be debited within 24 hours of the resolution

- Yard Operator must log all deviations from Published ITP (outside of tolerance) that it becomes aware of (regardless of cause) on TOMS, providing a preliminary reason / cause where possible.
- Every deviation must be linked to the relevant Train/Slot and Order number.
